

The Role of AI in the Future of Payments

Tuesday, 16th September 2025

Venue: Squire Patton Boggs, 60 London Wall, London EC2M 5TQ

Start: 1.30pm registrations for 2.00pm start

This meeting of the FPF will consider the role of AI in the Future of Payments.

Artificial Intelligence (AI) has the power to change the way we live and work and the way we pay for goods and services will be part of the change we experience. Within the hidden complexity that underpins today's retail payment systems, AI is likely to improve outcomes for operators, regulators, and consumers. We should expect to see more intelligent decision making, in real time, that improves customer experience, reduces fraud, and reduces costs for all stakeholders.

However, AI is fallible - it makes mistakes. How will the payments industry harness this capability without suffering from the possible downsides? At the same time, those who use the payment systems to commit crime will also benefit from the power of AI. Will this lead to a technology-enabled stand-off that produces no net benefit?

Meeting Agenda

Time	Speaker
